

Thank you for your choice of the MQS-34 signal routing switch. The MQS-34 is a signal switching device that routes either one signal to the A, B or both jacks, or selects one of two signals from either A or B jack and sends it to the Common jacks.

LEDs have been provided to indicate which jack(s); A,B or both, are connected to the Common jacks.

The MQS-34 is the ideal solution for any instrumentalist needing to switch between two amplifiers, or have the instrument present at both amps. The unit also provides for two instruments to be selected for a single amplifier.

OPERATION

The following two examples show possible set-up for the MQS-34.

EXAMPLE

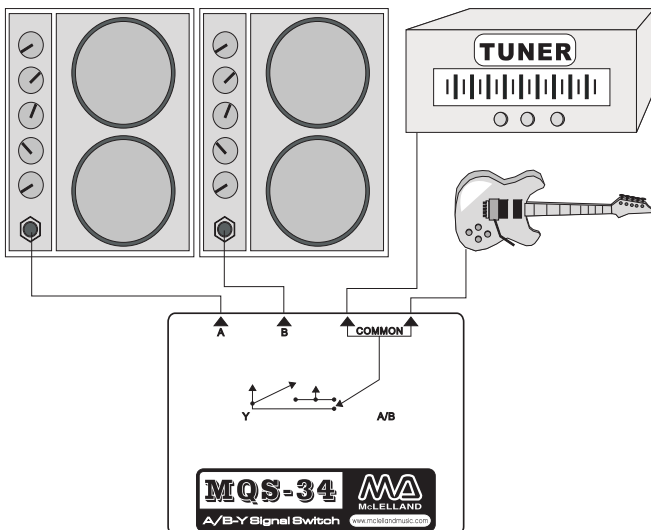

- Example One shows the MQS-34 selecting between two instruments to a single amplifier.
- Example Two shows the MQS-34 sending a single instrument between two amplifiers.

SPECIFICATION

THD: <0.01
S/N Ratio: 80dB

Dimensions: 95mm x 73mm x 40mm
Weight: 336 g
